

# Luigi Avitabile

Software Engineer | TypeScript | React | Angular | Java | Spring Boot

Naples, Italy | +39 333 751 9378 | [luigi.avitabile5@gmail.com](mailto:luigi.avitabile5@gmail.com) | [linkedin.com/in/luigi-avitabile](https://linkedin.com/in/luigi-avitabile) | [github.com/daevel](https://github.com/daevel) | [daevel.me](https://daevel.me)

## SUMMARY

Software Engineer with more than four years of experience across frontend (React, Angular, React Native, TypeScript) and backend (Java, Spring Boot) development. Delivered large-scale digital products in banking, finance, and public security, with hands-on experience in databases, cloud deployment (Azure), CI/CD pipelines, and AI-assisted development.

## AREAS OF EXPERTISE

- **Frontend Development:** TypeScript, JavaScript, React, Angular, Next.js, React Native, RxJS, RTK Query
- **Databases:** PostgreSQL, MySQL, MongoDB, Data Warehouse Querying
- **Testing:** Cypress, Karma, Vitest
- **Web Accessibility:** WCAG-compliant, responsive UI (Tailwind CSS)
- **Backend Development:** Java, Spring Boot, Node.js (Express), Python, REST API Design
- **Cloud & DevOps:** Azure, OpenShift, Bash Scripting, CI/CD Pipelines
- **Practices & Tools:** Git, Nx Monorepos, Code Reviews, Cross-Team API Coordination
- **AI-Assisted Development:** GitHub Copilot, Claude

## KEY ACHIEVEMENTS

- **Full-Stack Product Ownership:** Led, end-to-end from design to release, a full-stack SaaS product (Angular, Java/Spring Boot) for calculating risk perimeters in the banking sector, as the sole developer assigned to the project.
- **Backend Performance Optimization:** Improved microservice responsiveness by 10% through query optimization and architectural refactoring, replacing legacy systems in the digital payments domain.
- **Faster Developer Onboarding:** Cut new developer onboarding time from one week to two days by standardizing frontend architecture and reusable components across TypeScript, React, React Native, Nx and RTK Query.
- **National-Scale System Delivery:** Developed and maintained a mission-critical system for the public security sector, used by approximately 260,000 operators nationwide, and ensured the reliability of a highly sensitive system processing 10,000+ daily transactions.

## EXPERIENCE

- Frontend Engineer - L2** Apr. 2026 – Present  
*GFT Technologies Remote, Italy*
  - Hold full autonomy over frontend design and implementation decisions, later validated with the client, within an Agile/Scrum team with clearly distributed role ownership across sprint-based delivery cycles.
  - Standardized frontend architecture and reusable components across React, React Native, TypeScript, Nx and RTK Query, cutting new developer onboarding time from one week to two days.
  - Delivered 4 end-to-end card request journeys (credit, debit, prepaid, American Express) across React web and React Native mobile for a digital banking platform serving approximately 90,000 users.
  - Automated the integration of 20+ REST endpoints using react-query and a custom script generating TypeScript clients from YAML specifications, while applying AI-assisted development (GitHub Copilot, Claude) to accelerate delivery and code reviews.
  - Improved application responsiveness by 10% through client-side cache optimization (targeted invalidation, reduced redundant calls) with React Query.
- Frontend Engineer - L1** Mar. 2024 – Apr. 2026  
*GFT Technologies Remote, Italy*
  - Sole full-stack developer on a SaaS product for a leading Italian banking client, within the Credit domain, calculating risk perimeters across companies and subsidiaries, with hierarchical data representation via D3.js. Held full ownership from design to release. Built 20+ Spring Boot (Java) microservices overall supporting SaaS and banking-side products, managing relational (PostgreSQL) and non-relational (MongoDB) databases, including a predictive risk-calculation module leveraging DWH data.
  - Managed production deployment and monitoring on Azure, through dedicated pipelines and scheduled releases across 3 environments (dev, uat, prod), sustaining up to 2 releases per day during peak periods. Built an interactive Bash automation script for developer authentication, image upload and OpenShift deployment, cutting release time from 6h to 45min, adopted team-wide with positive feedback.
  - Delivered 10+ new Angular features that modernized the application's interface, automating document compilation previously performed manually by the client.
  - Designed and delivered 3+ standalone Angular 20+ applications for a major Italian banking client: a new feature enabling branch staff to process prepaid/American Express card requests directly, a full rewrite (from JSP) of an ATM security system, and a Credit-domain application (real-estate area) that accelerated case processing times.

## Full-Stack Developer

May 2022 – Feb. 2024

*Hi-Tech Systems*

*Naples, Italy*

- Sole client engagement within the public security sector, delivering projects for national law enforcement bodies.
- Developed and migrated a role-assignment system (Angular, Node.js/Express) from Angular 12 to 16, used by approximately 260,000 law enforcement operators nationwide, introducing UX and functional improvements that simplified previously time-consuming operations.
- Maintained and evolved a Java-based vehicle license plate recognition system operating nationwide, running daily control batches and ensuring reliability for a highly sensitive system handling 10,000+ transactions per day.
- Architected and built from scratch, using Angular 15 on Azure cloud, a credential verification portal for drone pilot licenses in collaboration with a national civil aviation authority, supporting 40,000+ registered operators and public security authorities.
- Architected and built from scratch, using Angular 15 on Azure cloud, an internal credential management system securing sensitive access to machines and servers, eliminating the risky practice of storing credentials on unprotected personal devices.

## PLC/HMI Engineer

Jun. 2021 – May 2022

*JSB Solutions*

*Sesto Fiorentino, Italy*

- Designed and commissioned industrial automation systems for pharmaceutical manufacturing clients, including Pfizer and AstraZeneca.

## PLC/HMI Engineer

Sep. 2019 – Mar. 2020

*3EM Engineering*

*Naples, Italy / International Assignments*

- Engineered and commissioned industrial automation systems for steel manufacturing clients, including Danieli Automation and Tata Steel, prior to transitioning into software development.

## PROJECTS

---

**Followoo** | *Next.js, React, TypeScript, Python (FastAPI), PostgreSQL, Tailwind CSS* [followoo.app](https://followoo.app)

- Built a privacy-first web app analyzing Instagram export data entirely client-side, reaching 30 users with confirmed engagement via PostHog analytics, without server-side uploads or storage. Engineered TypeScript logic to normalize and compare 7 distinct Instagram export datasets, with client-side ZIP processing, across 30+ reusable components. Improved user satisfaction by 30%, measured through direct feedback from a verified user pool.
- Designed and built the supporting backend in Python (FastAPI), with a layered architecture (router/service/repository), schema versioning via Alembic on Neon Postgres, JWT authentication (Clerk), rate limiting and monitoring (Sentry), preserving the privacy-first principle server-side as well.

**Culturando** (*University thesis project*) | *Next.js, React, TypeScript, Nx, PostgreSQL, PostGIS, Prisma, MapLibre GL JS*

- Designed and built from scratch the architecture of a geolocation-based cultural discovery platform in an Nx monorepo. Designed the database schema using PostgreSQL and PostGIS for geospatial data, with Prisma as ORM. Implemented authentication, user collection management, interactive maps, and automated book recognition via Meta Llama 3.2 Vision integration.

## EDUCATION

---

### Computer Science, BSc

Feb. 2027

*University of Naples "Parthenope" → Pegaso Digital University*

*Sep. 2021 – Dec. 2026*

- Transferred to an online/flexible-format program in 2026 to complete the degree while working full-time in the software industry; coursework concluding December 2026, degree conferral expected February 2027.

### I.T.S. Luigi Galvani

Sep. 2014 – Sep. 2019

*Electronics and Electrical Engineering, Technical Diploma (Final Grade: 100/100)*

## LANGUAGES

---

**Italian:** Native

**English:** B2 – Professional Working Proficiency

## CERTIFICATIONS

---

### Cambridge English B2 Certification

Dec. 2025

*Cambridge University Press & Assessment*

### Postman API Fundamentals Student Expert

Jul. 2025

*Postman*

### Angular Testing Masterclass

Apr. 2024

*Udemy*
